SAFETY & SECURITY

OUR EXPERTISE

Penetration testing (pentesting):

Simulate a real attacker to assess the actual impact of vulnerabilities.

Source code audit:

Identify vulnerabilities directly within applications and software.

Configuration audit:

Verify that your systems and equipment are securely configured.

Architecture audit:

Assess the overall robustness of your information system's design.

Organizational audit:

Assess your organization's cybersecurity risk maturity.

Physical audit:

Verify that physical access cannot bypass your IT security controls.

Human chain audit & phishing simulation:

Evaluate your organization's real-world resilience against attacks targeting users.
