CYBERSECURITY FOR INDUSTRIAL SYSTEMS

Risk analysis and audit

Securing OT/IT architectures and networks

Monitoring, detection, and incident response

SERMA
SAFETY & SECURITY

OUR SERVICE OFFERINGS

Assessment of existing facilities

- Maturity assessment and industrial asset mapping
- Compliance audit against IEC 62443, NIST, and client frameworks
- Security assessment of existing facilities and infrastructure

Risk analysis

- Industrial cybersecurity risk analysis based on EBIOS RM and IEC 62443
- Assessment of threats, vulnerabilities, and impacts on OT systems
- Zone- and conduit-based security approach for industrial architectures

Recommendations for organizational and technical security measures

- Definition of secure architectures using a defense-in-depth approach
- Implementation of organizational and technical security measures
- Securing data exchanges and removable media
- Monitoring and supervision of industrial system security

Support for the implementation of cybersecurity measures

- Cybersecurity support and assistance with tenders
- Implementation of processes, governance, and cyber crisis management
- Design, deployment, and maintenance of secure architectures
- SOC monitoring, technical support, and vendor management
- Documentation, technology watch, and team training

Security maintenance and penetration testing

Sales, integration, and maintenance of cybersecurity solutions

- Provision of cybersecurity solutions
- Audit, assessment, and consulting
- Solution architecture and integration
- Managed Security Service Center (MSSP) and support
